

93. Construction Materials

Note: To cover construction materials needed for building airfields, roads, bridges, housing, etc. Begin with a summary paragraph on the whole topic.

A. Timber and forest products.

1. Type and location of usable forests (amount, character and quality, accessibility, etc.).
2. Plants (Location and size of sawmills and other plants, capacity and activity, etc.).

B. Cement.

1. Sources (availability and location of lime, etc.).
2. Production (amount, location, and size of principal cement plants, etc.).

C. Sand gravel.

1 and 2 as in B, where applicable.

D. Building stone.

1 and 2 as above.

E. Brick and tile.

1 and 2 as above.

F. Other construction materials.

1 and 2 as applicable.

Note: A map or maps should be prepared showing commercial stands of timber and principal sawmills or sawmill centers, preferably by size, with other maps showing availability of construction materials with principal plants or centers (preferably by size) including cement plants, quarries, etc.
